The inventory investment decision and firm value: A conceptual framework
R. Nyerges (Edwardsville, IL, USA) ... 193
Stimulating the impact of process capability on lot sizes in batch manufacturing
S. Palaniswami (Mt. Pleasant, MI, USA) ... 203
Strategic inventory management of renewable energy resources. Aluminium as an energy storage medium and market commodity
E.C. Partington (Hong Kong) ... 211
An overview of the state and problems of inventory management in Finland
T. Pirttilä and V.-M. Virolainen (Lappeenranta, Finland) ... 217
The relationship of work-in-process inventories, manufacturing lead times and waiting line analysis
S. Subba Rao (Toledo, OH, USA) ... 221
A decision support system for materials management
M.G. Speranza (Brescia, Italy) and W. Ukovich (Trieste, Italy) ... 229
Forming the material supply structure through the choice of the production cooperation range
M. Sygit (Wroclaw, Poland) ... 237
Principal economic decisions of operational production management in Czechoslovak enterprises of electrotechnical industry
G. Tomek (Prague, Czechoslovakia) ... 243
The system implications of pure manufacturing policy options
M. Walbank (Manchester, UK) ... 247
Hierarchical production planning and multi-echelon inventory management
W.H.M. Zijm (Enschede, The Netherlands) ... 257

Mathematical Modelling of Inventories

Some issues on the modelling of incentives for special sales
F.J. Arcelus and G. Srinivasan (Fredericton, Canada) ... 267
Combinational optimization of the location–inventory problem
M. Bogataj and L. Bogataj (Ljubljana, Yugoslavia) ... 273
Perturbed inventory systems with delays
L. Bogataj and M. Botataj (Ljubljana, Yugoslavia) ... 277
Heavy-traffic inventory–production systems
E.V. Bulinskaya (Moscow, Russia) ... 283
Performance optimization of a system through the transitive interaction between its sections
V. Fragopoulou and R. Kalfakakou (Thessaloniki, Greece) ... 293
Order point/order quantity models with random yield
Y. Gerchak (Waterloo, Canada) ... 297
Controlled stochastic processes and inventories
H.-J. Girlich and B. Kolkwitz (Leipzig, Germany) ... 299
Hypergame analysis of the stability of relationships between computerbased logistics systems
I. Graham, F. O'Doherty, A. McKinnon and L. Baxter (Edinburgh, UK) ... 303
Intertemporal generalization of the relationship between material requirements planning and input–output analysis
R.W. Grubbström and P. Orvin (Linköping, Sweden) ... 311
Extension of a reliability-type inventory model to Just-in-Time systems
P. Kelle and H. Schneider (Baton Rouge, LA, USA) ... 319
A stochastic inventory problem with piecewise quadratic costs
M. Parlar (Hamilton, Canada) and R. Rempala (Warsaw, Poland) ... 327
Single facility, multi-item lot sizing under Just-in-Time and "cyclic scheduling for improvement"
S. Ramani and N. Narayanan (Bombay, India) ... 333
Average cost estimation of lot-sizing heuristics
K. Richter (Chemnitz, Germany) ... 341
Changing the givens in modelling inventory problems: The example of just-in-time systems
E.A. Silver (Calgary, Canada) ... 347
Minimum cost allocation of supply centers with limitation on time delivery
C. Tsouros and M. Satratzemi (Thessaloniki, Greece) ... 353
Multiple batch structures in throughput scheduling
P.J. Weeda (Enschede, The Netherlands) ... 359
Incremental order quantity for the case of very lumpy demand
C. Yilmaz (Manisa, Turkey) ... 367
List of Referees ... 373
